

Figure 2: Key components of creativity

Value: Did you use any Ideas?
Variety: Did the ideas seem repetitive?
Persist: Did you have to open it up a lot to get Ideas?

Value: agentic dev benchmark
Variety: Deduplication
persistance: prompt-the-user frequency

MVP:
- Pi, maybe even just claude code tbh.
- basic, basic chatbot vi, only special thing is occasional multiple-choice.
- has RAG tools:
  - arxiv search, agent-readable pipeline, etc.
  - ideas db, links to papers, notes, sumary, etc.
- Agents:
  - main chat
  - dedup evaluator
  - maybe research-specific subagents?
- Model choice: cheapo API. eg:
  - Luna
  - Flash
  - Haiku
- design considerations
  - aggressive context management
  - do not be sophisticated. Naive solutions only. Elegant ideas should be documented for later. (meta)
